

ELIZABETH LUGO

Front-End Software Developer

Brighton, CO | (720) 394-1160 | norcross.beth@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Front-end focused software developer with 5+ years of experience building web-based tools, internal applications, and data-driven interfaces using HTML5, CSS3, JavaScript, and JSON. Combines development experience at Google and Intel with a growing freelance practice building JSON-driven, modular websites for small businesses, plus self-directed portfolio and author-site projects demonstrating responsive layout techniques (Flexbox, CSS Grid) and reusable, template-based architecture. Comfortable leveraging AI-assisted development workflows to accelerate builds, debug efficiently, and keep code clean and well-documented. Strong track record automating workflows, training and onboarding team members, and translating business requirements into functional, maintainable solutions.

TECHNICAL SKILLS

Front-End: HTML5, CSS3 (Flexbox, CSS Grid, responsive design), JavaScript, JSON, DOM manipulation, fetch()/async-await

Languages & Data: Python, VB.NET, SQL (Oracle SQL, GoogleSQL), XML, PHP

Version Control & Workflow: Git, GitHub, GitHub Pages, JIRA, Agile/SCRUM

Dev Environments: VS Code, Visual Studio, PyCharm

Other: AI-Assisted Development (leveraging LLM tooling for code review, architecture planning, and debugging), API Testing & QA, Requirements Gathering, Process Automation, Technical Documentation, Data Modeling (Excel/Google Sheets)

WEB DEVELOPMENT PROJECTS

Personal Portfolio Site — elizabeth-lugo-code.github.io/portfolio-site/

- Designed and built a responsive, multi-page portfolio site from scratch using HTML5, CSS3 (Flexbox, CSS Grid), and vanilla JavaScript
- Architected a fully modular, JSON-driven content system using fetch() and dynamic DOM rendering (.map())/template literals), separating content from markup for long-term maintainability
- Deployed and version-controlled through Git/GitHub, hosted on GitHub Pages

Reusable Site Template — github.com/Elizabeth-Lugo-Code/site-template

- Built a reusable, JSON-driven website template/framework to standardize architecture and speed up build time across independent web projects
- Established reusable front-end conventions (modular CSS sectioning, per-page JSON content files, consistent layout patterns) applied across multiple live sites

Author Website — Hestia Hearthwood — elizabeth-lugo-code.github.io/hestia-hearthwood/

- Built a JSON-driven, multi-page author website to support an independent creative writing project, extending the reusable site template to a second, fully independent use case
- Managed content, styling, and deployment independently using the same Git/GitHub-based workflow as other properties

Freelance Client Site — Rocksteady LLC

- Built a proof-of-concept marketing website for a local construction business using the reusable site template, as part of an in-progress freelance web development practice targeting service-based small businesses

EXPERIENCE

Front Desk Associate | NFC Amenity Management *Apr 2026 – Present*

- Perform nightly package audits reconciling physical inventory against Yardi ConciergeIQ system records, identifying and correcting data discrepancies to maintain accurate resident package tracking

- Manage end-to-end package lifecycle in Yardi, from intake and system logging through resident pickup confirmation, processing real-time deliveries overnight
- Generate and archive daily Keyper system reports into a structured file system for recordkeeping and audit trail
- Serve as first point of contact for emergency maintenance issues overnight, creating detailed work orders and coordinating real-time response with maintenance teams via phone and Microsoft Teams
- Conduct nightly property and equipment inspections to maintain consistent resident experience
- Document and hand off shift activity via structured end-of-shift reports, ensuring continuity across day/night teams

Career Break | Raising Child at Home *Dec 2022 – Apr 2026*

- Continued building web development skills independently, including HTML5/CSS3/JavaScript projects and a JSON-driven personal portfolio site

UI Front-End Developer | Google (via Accenture) *Dec 2021 – Nov 2022*

- Built and maintained front-end interfaces using HTML5, CSS, and JavaScript for an internal employee management tool used across cross-functional teams
- Integrated a PHP-based data injection layer to consume BigQuery data pipelines developed by backend teammates, connecting the front-end UI to live organizational data
- Collaborated within a 4-person cross-functional team (Google stakeholders and Accenture developers), participating in recurring stakeholder meetings to align on requirements
- Adapted to evolving project scope amid project management turnover, maintaining delivery continuity and code quality

Workflow Application Developer | Google (via Accenture) *Mar 2021 – Nov 2021*

- Developed workflow applications in Connect Composer using JavaScript and GoogleSQL, maintaining continuity of an ongoing project through a transition in employer of record
- Trained and onboarded 7 new developers on internal workflow tooling, testing procedures, and documentation standards
- Built 3 custom Google Sheets tools to streamline time-tracking and data organization for daily reporting under an Agile/SCRUM process, improving reporting accuracy for management
- Maintained project continuity and served as a stable technical resource through daily stand-ups and successive management transitions

Developer Support Specialist II | Google (via ICONMA) *Mar 2020 – Dec 2020*

- Developed, tested, and documented workflow applications in Connect Composer using JavaScript and GoogleSQL for internal Google tooling
- Engineered a reusable, general-purpose API testing workflow capable of validating data retrieval across any given API and rendering results as structured, JSON-like objects, reducing repetitive setup for future integrations
- Authored technical documentation for each completed workflow, detailing API usage, testing procedures, and run instructions for handoff
- Shadowed senior developers to ramp up on internal tooling, then independently owned a fast-tracked workflow project, adapting to evolving revision processes under compressed timelines
- Participated in weekly cross-functional check-ins to align on project status across the development team

Software Developer Intern | Colorado Farm Bureau Mutual Insurance *Jun 2019 – Oct 2019*

- Designed and built a VB.NET desktop application with an Oracle SQL backend to automate monthly, quarterly, and annual accounting reports previously compiled manually in Excel, consolidating data via user-defined parameters (text inputs, dropdowns, selection filters)
- Delivered the full project lifecycle independently: application development, rollback scripts, server installation documentation, and end-user testing/how-to guides
- Partnered with the department Business Analyst in weekly progress meetings to align tool functionality with accounting team workflows
- Received internal award nomination for delivering significant operational efficiency gains; tool was adopted department-wide

Firmware Developer | Intel Corporation (via Kelly Services) *Apr 2017 – May 2018*

- Processed and packaged firmware data for 8 major customers (including Amazon, Dell, HP, and Oracle) using Python-based post-processing scripts, managing custom inputs per client and reconciling packaged output against source repository data
- Documented all post-processing changes and repository updates per client for version-controlled delivery tracking
- Trained and onboarded 3 new team members on firmware packaging processes and post-processing tooling as the team scaled
- Independently developed a Python-based prototype tool to streamline and partially automate the manual post-processing workflow, reducing personal processing time
- Collaborated cross-functionally with IT/DevOps to integrate legacy server infrastructure into the team's workflow

ADDITIONAL EXPERIENCE

Informal Development Consultant | Peer Debugging Support *Jul 2016 – Feb 2020*

- Provided ongoing debugging and troubleshooting support to a professional developer on a recurring basis throughout college coursework, diagnosing and resolving bugs across various codebases

EDUCATION

B.S. Computer Information Systems — Web & Game Programming

DeVry University | 2020 | Coursework: HTML5, CSS, JavaScript, PHP, MySQL, C# | Dean's List (2016–2020) | Sigma Alpha Pi – National Society of Leadership and Success

High School Diploma

Brighton High School | Brighton, CO | 2016

CERTIFICATIONS & RECOGNITION

- Employee Excellence Nomination — Colorado Farm Bureau Mutual Insurance (2019)
- Gold Crown, National Yearbook Recognition — Rocky Mountain Journalism (2016)
